Medical Radiation Dosimetry: Theory of Charged Particle Collision Energy Loss Brian J. McParland

Accurate radiation dosimetry is a requirement of radiation oncology, diagnostic radiology and nuclear medicine. It is necessary so as to satisfy the needs of patient safety, therapeutic and diagnostic optimisation, and retrospective epidemiological studies of the biological effects resulting from low absorbed doses of ionising radiation. The radiation absorbed dose received by the patient is the ultimate consequence of the transfer of kinetic energy through collisions between energetic charged particles and atoms of the tissue being traversed. Thus, the ability of the medical physicist to both measure and calculate accurately patient dosimetry demands a deep understanding of the physics of charged particle interactions with matter. Interestingly, the physics of charged particle energy loss has an almost exclusively theoretical basis, thus necessitating an advanced theoretical understanding of the subject in order to apply it appropriately to the clinical regime.

? Each year, about one-third of the world's population is exposed to ionising radiation as a consequence of diagnostic or therapeutic medical practice. The optimisation of the resulting radiation absorbed dose received by the patient and the clinical outcome sought, whether diagnostic or therapeutic, demands accuracy in the evaluation of the radiation absorbed doses resulting from such exposures. This requirement arises primarily from two broadly-encompassing factors:

- The requirement in radiation oncology for a 5% or less uncertainty in the calculation and measurement of absorbed dose so as to optimise the therapeutic ratio of the probabilities of tumour control and normal tissue complications; and
- The establishment and further refinement of dose reference levels used in diagnostic radiology and nuclear medicine to minimise the amount of absorbed dose for a required degree of diagnostic benefit.

The radiation absorbed dose is the outcome of energetic charged particles decelerating and transferring their kinetic energy to tissue. The calculation of this energy deposition, characterised by the stopping power, is unique in that it is derived entirely from theoretical principles. This dominant role of the associated theory makes its understanding of fundamental to the calculation of the radiation absorbed dose to the patient.

The theoretical development of charged particle energy loss recognised in medical physics textbooks is in general limited to basic derivations based upon classical theory, generally a simplified form of the Bohr theory. More advanced descriptions of, for example, the Bethe-Bloch quantum result usually do not go beyond the simple presentation of the result *without* full explanation of the theoretical development of the theory and consideration of its limitations, its dependencies upon the Born perturbation theory and the various correction factors needed to correct for the failures of that Born theory at higher orders. This is not appropriate for a full understanding of the theory that its importance deserves. The medical radiation physicist should be aware of the details of the theoretical derivations of charged particle energy loss in order to appreciate the levels of accuracy in tabular data provided in reports and the calculation methodologies used in modern Monte Carlo calculations of radiation dosimetry.

From reader reviews:

Angel Gardner:

Do you have favorite book? Should you have, what is your favorite's book? E-book is very important thing for us to know everything in the world. Each guide has different aim or goal; it means that reserve has different type. Some people experience enjoy to spend their time to read a book. They are really reading whatever they consider because their hobby is reading a book. Consider the person who don't like reading through a book? Sometime, person feel need book once they found difficult problem or exercise. Well, probably you will require this Medical Radiation Dosimetry: Theory of Charged Particle Collision Energy Loss.

Theresa Wilkins:

Reading can called thoughts hangout, why? Because while you are reading a book specifically book entitled Medical Radiation Dosimetry: Theory of Charged Particle Collision Energy Loss your head will drift away trough every dimension, wandering in each and every aspect that maybe not known for but surely can become your mind friends. Imaging just about every word written in a book then become one web form conclusion and explanation that will maybe you never get ahead of. The Medical Radiation Dosimetry: Theory of Charged Particle Collision Energy Loss giving you a different experience more than blown away your brain but also giving you useful details for your better life in this particular era. So now let us present to you the relaxing pattern this is your body and mind will probably be pleased when you are finished studying it, like winning an activity. Do you want to try this extraordinary spending spare time activity?

Lynn Hardie:

Are you kind of stressful person, only have 10 or 15 minute in your day to upgrading your mind proficiency or thinking skill actually analytical thinking? Then you are receiving problem with the book in comparison with can satisfy your short space of time to read it because all this time you only find publication that need more time to be learn. Medical Radiation Dosimetry: Theory of Charged Particle Collision Energy Loss can be your answer as it can be read by a person who have those short time problems.

Crystal Babin:

Reading a book to get new life style in this calendar year; every people loves to read a book. When you study a book you can get a large amount of benefit. When you read ebooks, you can improve your knowledge, since book has a lot of information onto it. The information that you will get depend on what types of book that you have read. If you would like get information about your research, you can read education books, but if you want to entertain yourself you are able to a fiction books, such us novel, comics, as well as soon. The Medical Radiation Dosimetry: Theory of Charged Particle Collision Energy Loss will give you new experience in studying a book.
