Data Classification: Algorithms and Applications (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series)

Data Classification: Algorithms and Applications (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series)

Data Classification: Algorithms and Applications (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series)

Comprehensive Coverage of the Entire Area of Classification

Research on the problem of classification tends to be fragmented across such areas as pattern recognition, database, data mining, and machine learning. Addressing the work of these different communities in a unified way, **Data Classification: Algorithms and Applications** explores the underlying algorithms of classification as well as applications of classification in a variety of problem domains, including text, multimedia, social network, and biological data.

This comprehensive book focuses on three primary aspects of data classification:

- *Methods:* The book first describes common techniques used for classification, including probabilistic methods, decision trees, rule-based methods, instance-based methods, support vector machine methods, and neural networks.
- *Domains: T*he book then examines specific methods used for data domains such as multimedia, text, time-series, network, discrete sequence, and uncertain data. It also covers large data sets and data streams due to the recent importance of the big data paradigm.
- *Variations:* The book concludes with insight on variations of the classification process. It discusses ensembles, rare-class learning, distance function learning, active learning, visual learning, transfer learning, and semi-supervised learning as well as evaluation aspects of classifiers.

From reader reviews:

Frank Miller:

Reading a book tends to be new life style within this era globalization. With studying you can get a lot of information that will give you benefit in your life. Together with book everyone in this world can share their idea. Guides can also inspire a lot of people. A lot of author can inspire their own reader with their story or their experience. Not only the story that share in the publications. But also they write about the ability about something that you need example. How to get the good score toefl, or how to teach your children, there are many kinds of book which exist now. The authors these days always try to improve their ability in writing, they also doing some investigation before they write with their book. One of them is this Data Classification: Algorithms and Applications (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series).

Carmen Russell:

The actual book Data Classification: Algorithms and Applications (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series) has a lot info on it. So when you check out this book you can get a lot of benefit. The book was published by the very famous author. The author makes some research just before write this book. This specific book very easy to read you can find the point easily after looking over this book.

Kyle Smallwood:

Reading a book to get new life style in this 12 months; every people loves to read a book. When you learn a book you can get a great deal of benefit. When you read textbooks, you can improve your knowledge, because book has a lot of information onto it. The information that you will get depend on what types of book that you have read. If you wish to get information about your examine, you can read education books, but if you act like you want to entertain yourself look for a fiction books, these kinds of us novel, comics, and soon. The Data Classification: Algorithms and Applications (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series) will give you a new experience in examining a book.

Tara Reynolds:

As a university student exactly feel bored for you to reading. If their teacher asked them to go to the library or to make summary for some book, they are complained. Just very little students that has reading's internal or real their pastime. They just do what the teacher want, like asked to the library. They go to presently there but nothing reading very seriously. Any students feel that studying is not important, boring and can't see colorful images on there. Yeah, it is for being complicated. Book is very important in your case. As we know that on this period of time, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. Therefore this Data Classification: Algorithms and Applications (Chapman & Hall/CRC Data Mining and Knowledge Discovery Series) can make you experience more interested to read.
