Monitor the Temperature of Almost Anything, Anywhere: The Users and Benefits of Cloud Based Sensors Mr. Harry J. Schechter

Temperature is a significant threat to companies around the world, especially in data centers, server and telecommunications rooms, biotechnology/pharmaceutical/medical facilities and companies requiring commercial refrigeration. A temperature change can cost thousands, if not millions of dollars in damage and lost productivity. Mitigating temperature risks involves careful planning and deployment to avoid costly mistakes and false positives. This book presents the ten most important factors in monitoring temperature and other environmental conditions and how managing these ten factors can decrease temperature related losses and save money. The book concludes with industry specific sections on how to implement enterprise grade environmental monitoring with little or no technical knowledge while sharing important lessons learned from actual Temperature@lert customers in IT, Bio Pharma, Food Service, Property Management, and Agricultural industries.
