Optical Processes in Semiconductors (Dover Books on Physics)

Jacques I. Pankove

Optical Processes in Semiconductors (Dover Books on Physics) Jacques I. Pankove

Based on a series of lectures at Berkeley, 1968–1969, this is the first book to deal comprehensively with all of the phenomena involving light in semiconductors. The author has combined, for the graduate student and researcher, a great variety of source material, journal research, and many years of experimental research, adding new insights published for the first time in this book.

Coverage includes energy states in semiconductors and their perturbation by external parameters, absorption, relationships between optical constants, spectroscopy, radiative transitions, nonradiative recombination, processes in pn junctions, semiconductor lasers, interactions involving coherent radiation, photoelectric emission, photovoltaic effects, polarization effects, photochemical effects, effect of traps on luminescence, and reflective modulation.

The author has presented the subject in a manner which couples readily to physical intuition. He introduces new techniques and concepts, including nonradiative recombination, effects of doping on optical properties, Franz-Keldysh effect in absorption and emission, reflectance modulation, and many others. Dr. Pankove emphasizes the underlying principle that can be applied to the analysis and design of a wide variety of functional devices and systems. Many valuable references, illustrative problems, and tables are also provided here.

From reader reviews:

Jason Faria:

What do you ponder on book? It is just for students because they're still students or the idea for all people in the world, what the best subject for that? Merely you can be answered for that concern above. Every person has different personality and hobby for each and every other. Don't to be pressured someone or something that they don't need do that. You must know how great in addition to important the book Optical Processes in Semiconductors (Dover Books on Physics). All type of book are you able to see on many options. You can look for the internet options or other social media.

Alice Myers:

As people who live in the modest era should be up-date about what going on or data even knowledge to make all of them keep up with the era that is always change and move ahead. Some of you maybe will update themselves by reading books. It is a good choice for yourself but the problems coming to anyone is you don't know which one you should start with. This Optical Processes in Semiconductors (Dover Books on Physics) is our recommendation to make you keep up with the world. Why, because this book serves what you want and want in this era.

Debbie Allen:

Many people spending their moment by playing outside using friends, fun activity along with family or just watching TV the entire day. You can have new activity to enjoy your whole day by examining a book. Ugh, you think reading a book can actually hard because you have to bring the book everywhere? It all right you can have the e-book, taking everywhere you want in your Smartphone. Like Optical Processes in Semiconductors (Dover Books on Physics) which is keeping the e-book version. So , try out this book? Let's see.

Richard McCormick:

Reserve is one of source of information. We can add our understanding from it. Not only for students but also native or citizen need book to know the revise information of year for you to year. As we know those books have many advantages. Beside all of us add our knowledge, can bring us to around the world. With the book Optical Processes in Semiconductors (Dover Books on Physics) we can consider more advantage. Don't you to be creative people? To become creative person must choose to read a book. Just simply choose the best book that appropriate with your aim. Don't possibly be doubt to change your life with this book Optical Processes in Semiconductors (Dover Books on Physics). You can more attractive than now.
