Nonlinear Nonequilibrium Thermodynamics II: Advanced Theory (Springer Series in Synergetics)

Rouslan L. Stratonovich

This two-volume work gives the first detailed coherent treatment of a relatively young branch of statistical physics - nonlinear nonequilibrium and fluctuational dissipative thermodynamics. This area of research has taken shape rather recently: its development began in 1959. The earlier theory - linear nonequilibrium thermodynamics - is in principle a simple special case of the new theory. Despite the fact that the title of the book includes the word 'nonlinear', it also covers the results of linear nonequilibrium thermodynamics. The presentation of the linear and nonlinear theories is done within a common theoretical framework that is not subject to the linearity condition. The author hopes that the reader will perceive the intrinsic unity of this discipline, the uniformity and generality of its constituent parts. This theory has a wide variety of applications in various domains of physics and physical chemistry, enabling one to calculate thermal fluctuations in various nonlinear systems. The book is divided into two volumes. Fluctuation-dissipation theorems (or relations) of various types (linear, quadratic and cubic, classical and quantum) are considered in the first volume. There one encounters the Markov and non-Markov fluctuation-dissipation theorems (FDTs), theorems of the first, second and third kinds. Nonlinear FDTs are less known than their linear counterparts. The present second volume of the book deals with the advanced theory. It consists of four chapters. The connection and interdependence of the material in the various chapters of both volumes are illustrated in the accompanying diagram.

From reader reviews:

Timothy Rowe:

The ability that you get from Nonlinear Nonequilibrium Thermodynamics II: Advanced Theory (Springer Series in Synergetics) may be the more deep you digging the information that hide into the words the more you get interested in reading it. It doesn't mean that this book is hard to know but Nonlinear Nonequilibrium Thermodynamics II: Advanced Theory (Springer Series in Synergetics) giving you excitement feeling of reading. The copy writer conveys their point in a number of way that can be understood simply by anyone who read this because the author of this book is well-known enough. This book also makes your own vocabulary increase well. So it is easy to understand then can go along, both in printed or e-book style are available. We highly recommend you for having this Nonlinear Nonequilibrium Thermodynamics II: Advanced Theory (Springer Series in Synergetics) instantly.

Alice Smith:

Reading can called brain hangout, why? Because when you find yourself reading a book specifically book entitled Nonlinear Nonequilibrium Thermodynamics II: Advanced Theory (Springer Series in Synergetics) your head will drift away trough every dimension, wandering in most aspect that maybe not known for but surely might be your mind friends. Imaging just about every word written in a e-book then become one application form conclusion and explanation that will maybe you never get prior to. The Nonlinear Nonequilibrium Thermodynamics II: Advanced Theory (Springer Series in Synergetics) giving you one more experience more than blown away your head but also giving you useful info for your better life within this era. So now let us explain to you the relaxing pattern the following is your body and mind will likely be pleased when you are finished examining it, like winning a. Do you want to try this extraordinary paying spare time activity?

Laurie Riley:

That guide can make you to feel relax. This particular book Nonlinear Nonequilibrium Thermodynamics II: Advanced Theory (Springer Series in Synergetics) was colorful and of course has pictures on there. As we know that book Nonlinear Nonequilibrium Thermodynamics II: Advanced Theory (Springer Series in Synergetics) has many kinds or category. Start from kids until adolescents. For example Naruto or Investigator Conan you can read and feel that you are the character on there. Therefore not at all of book are make you bored, any it can make you feel happy, fun and loosen up. Try to choose the best book for yourself and try to like reading this.

Daniel Young:

As a scholar exactly feel bored in order to reading. If their teacher questioned them to go to the library or to make summary for some reserve, they are complained. Just minor students that has reading's heart or real their hobby. They just do what the teacher want, like asked to go to the library. They go to generally there

but nothing reading significantly. Any students feel that reading is not important, boring and can't see colorful photographs on there. Yeah, it is to become complicated. Book is very important for you. As we know that on this period of time, many ways to get whatever we want. Likewise word says, many ways to reach Chinese's country. Therefore , this Nonlinear Nonequilibrium Thermodynamics II: Advanced Theory (Springer Series in Synergetics) can make you feel more interested to read.
